STUDENT CASE STUDY EXECUTION REPORT

Department	FED
Subject	DSA -2
Academic year	I – III Semester(2025-26)
Faculty Name	Mohammed Razia Alangir Banu
Student Name	B.Deepak Goud
Roll Number	2520080035
Branch	AI&DS
Course Outcome	3

Case Study Topic : InstaShare — story visibility prediction system(BFS)

InstaShare predicts the short-term visibility of a newly uploaded story.

When a creator uploads a story, the platform performs a **bounded Breadth First Search (BFS)** on the follower graph up to depth 3 because users beyond 3 hops rarely interact with the story.

WorkDone Summary:

The InstaShare Story Visibility Prediction System was developed to predict the reach and visibility of social media stories using data analytics and machine learning techniques. The project involved collecting and analyzing user engagement metrics such as views, likes, shares, posting time, and audience activity patterns to identify factors affecting story performance. A predictive model was implemented to estimate story visibility and provide insights that help users optimize content timing and improve audience engagement. The system supports data-driven decision-making by offering accurate visibility predictions and performance analytics.

Implementation Details:

1. Collected story engagement data such as views, likes, shares, and posting times.
2. Cleaned and preprocessed the collected data for analysis.
3. Extracted key features influencing story visibility and audience engagement.
4. Developed a machine learning model to predict story reach and visibility.
5. Evaluated the model using historical performance data to improve accuracy.
6. Created a dashboard to display predictions, engagement metrics, and analytics insights.
